 - 2.2 Features

1. Course Content

- Understand Dify's basic features to facilitate subsequent AI agent development.

2. Dify

2.1 Introduction

- Dify is an open-source development and deployment platform for **production-grade Agentic AI solutions**. Developers can quickly build, deploy, and scale AI applications without complex technical barriers.

2.2 Features

- Visual AI application building

Design AI workflows and applications intuitively through **drag-and-drop operations**, supporting the combination and nesting of complex logic without in-depth backend development. Quickly go from concept to underlying logic and build powerful AI agent applications.

- Seamless access to AI large models from global model providers

Just apply for the API-KEY of the corresponding model provider to connect to hundreds of online model services with one click.

- Multi-source data support

Dify can extract and transform data from diverse data sources, automatically build indexes, and store them in a vector database, providing efficient RAG (Retrieval-Augmented Generation) for large models. You can directly deploy a local RAG knowledge base.

- Rich plugin system

Through Dify's rich plugins, AI large models can be combined with tools and RAG knowledge bases to become AI agents, providing assistance in building AI applications for different vertical domains.
