

YOLO Environment Setup

Note: The factory virtual machine already has the environment set up, so there is no need to set it up again. This tutorial is provided for setting up your own personal environment.

1. System Kernel and Architecture

```
uname -a
```

A terminal window with a dark purple background. The prompt is 'yahboom@VM: ~/microros_ws\$'. The command 'uname -a' has been entered and executed. The output is 'Linux VM 6.8.0-136-generic #136-22.04.1-Ubuntu SMP PREEMPT_DYNAMIC Fri Jul 3 16:29:11 UTC x86_64 x86_64 x86_64 GNU/Linux'.

```
yahboom@VM: ~/microros_ws$ uname -a
Linux VM 6.8.0-136-generic #136-22.04.1-Ubuntu SMP PREEMPT_DYNAMIC Fri Jul 3 16:29:11 UTC x86_64 x86_64 x86_64 GNU/Linux
```

2. Prerequisites

```
sudo apt update
sudo apt install python3-pip -y
sudo pip install -U pip
```

3. Install Ultralytics

```
pip3 install ultralytics
```
