

OpenClaw Introduction

Course Overview

This course introduces the basic concepts of OpenClaw, helping you quickly understand what OpenClaw is, its core features, and its unique advantages. By the end of this course, you will have a preliminary understanding of OpenClaw, laying the foundation for further in-depth learning.

Course Content

- Understand the definition and core value of OpenClaw
- Master the key features and characteristics of OpenClaw

1. What is OpenClaw

OpenClaw is a self-hosted AI agent Gateway that connects your commonly used chat applications (such as Discord, Google Chat, iMessage, Matrix, Microsoft Teams, Signal, Slack, Telegram, WhatsApp, Zalo, etc.) to AI coding agents. You only need to run a Gateway process on your own machine, and it becomes the bridge between your messaging application and an always-online AI assistant.

2. Core Features

- **Multi-channel support:** A single Gateway can connect to multiple chat channels simultaneously
- **Session management:** Creates an independent session for each sender, keeping the context coherent
- **Agent-native:** Built specifically for coding agents, supporting tool use, sessions, memory, and multi-agent routing
- **Self-hosted:** Runs on local hardware, with your data fully under your control

3. Unique Advantages

Feature	Description
Self-hosted	Runs on your hardware, works by your rules
Multi-channel	One gateway serves multiple chat channels simultaneously
Agent-native	Designed specifically for AI coding agents

4. Summary

OpenClaw provides developers and advanced users with a convenient, secure, and controllable way to use AI assistants. By connecting various chat channels, it makes it possible to communicate with AI agents anytime, anywhere, while maintaining full control over your data.
